The ICT Handbook for Primary Teachers will help all those involved in primary education, whether in training, teaching or leadership roles, to develop the ICT knowledge, understanding and skills required to enhance children's learning in the classroom. This new edition reflects the changes to the curriculum from 2014. It includes a new section on the Computing curriculum and an overview of the reorganisation of those online agencies that serve to support ICT. Covering theory and practise this essential handbook explores and outlines the usefulness of a wide range of up to date ICT resources in a range of primary contexts, and advice is offered on assessing whether ICT is preferable to other approaches for 'enhancing learning'. With reference to supplementary online resources, providing activities, multimedia resources and further reading, the book covers: the requirements of the new Computing curriculum, the place for ICT in enhancing teaching and learning across the curriculum, using ICT in core curriculum subjects and in cross-curricular contexts, different models of e-learning (interactive whiteboards, tablet PCs, mobile devices, the Internet etc), how ICT can be used to help pupils with special educational needs and using ICT for planning, delivery, assessment and recording. This book is an indispensable guide to ICT for students on PGCE, BEd and undergraduate teaching courses, along with practising teachers, SENCOs, ICT coordinators and school leaders.

Cambridge Primary Science is a flexible, engaging course written specifically for the Cambridge Primary Science curriculum framework. This Teacher's Resource for Stage 5 contains guidance on all components in the series. Select activities and exercises to suit your teaching style and your learners' abilities from the wide range of ideas presented. Guidance includes suggestions for differentiation and assessment, and supplementing your teaching with resources available online, to help tailor your scheme of work according to your needs. Answers to questions from the Learner's Book and Activity Book are also included. The material is presented in editable format on CD-ROM, as well as in print, to give you the opportunity to adapt it to your needs.

We've got even better, clearer explanations, plus coverage of all the changes in the Official Guide to GMAT. If you're ready to kick butt on the GMAT, this is your book!

This report summarizes results from the 1994 National Assessment of Educational Progress (NAEP), specifically those results concerning geography and U. S. history. The 1994 NAEP asked 4th-, 8th-, and 12th-grade students a series of questions designed to assess their knowledge level and skills applications in specific subjects. This report provides an in-depth look at the type of tasks that made up the assessments in geography and U. S. history and how the students performed on those tasks. It makes extensive use of examples of student work and of exercise-level statistics in examining performance in different skills areas and on particular assessment exercises. Specific attention is given to the ways that students use the tools and resources of history and geography. The questions reflected the content and cognitive dimensions deemed essential for an understanding of these subjects. One content dimension included four themes: change and continuity in U.S. democracy: ideas, institutions, practices, and controversies; the gathering and interaction of peoples, cultures, and ideas; economic and technological changes and their relation to society, ideas, and the environment; and the changing role of the United States in the world. A second content dimension covers eight time periods: Three Worlds and Their Meeting in the Americas (beginnings to 1607); Colonization, Settlement, and Communities (1607 to 1763); The Revolution and the New Nation (1763 to 1815); Expansion and Reform (1801 to 1861); Crisis of the Union: Civil War and Reconstruction (1850 to 1877); Development of Modern America (1865 to 1920); Modern America and the World Wars (1914 to 1945); and Contemporary America (1945 to present). At every grade, the overall geography performance of males was higher than that of females; however, in U.S. history overall performances for males and females was significantly different at 12th grade only where males slightly outperformed females. In both subject areas, the performance of White students was higher than that of Black or Hispanic students. (MJP)
