These are covered in operating system design and implementation. Operating System Design Goals. It is quite complicated to define all the goals and specifications of the operating system while designing it. The design changes depending on the type of the operating system i.e if it is batch system, time shared system, single user system, multi user system, distributed system etc. There are basically two types of goals while designing an operating system.

Tanenbaum's 3rd edition of Operating Systems Design & Implementation is still one of the best books on operating systems available. It provides a detailed description of the unix-like system, MINIX 3. In addition to the theory of how operating systems function and the types of problems that can arise it provides most of the source code for the OS.
