#1 NEW YORK TIMES BESTSELLER When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent “ grand design ” of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the “ multiverse ” —the idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the only viable candidate for a “ theory of everything ” : the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

The Lizard Keeper's Manual by Philippe de Vosjoli intends to provide real detailed information for all devoted lizard owners who wish to provide the very best of care for their pets. The author states in the foreword, "In terms of the herpetoculture of reptiles, the keeping of lizards is probably the most challenging." He explains that "Lizards demonstrate a great diversity of adaptations and specializations," and thus keepers need the very best advice and soundest information possible, which is what The Lizard Keeper's Manual provides to its readers. In over 200 pages, this colorful volume analyzes the needs of insect-eating lizards, of which there are literally thousands of species. Some lizards (the ones with generic housing and dietary requirements) are easy to maintain, though others have very specific needs (in terms of temperature, diet, humidity, etc.). As stated in the introduction, "The purpose of this book is to give herpetoculturists, both beginners and those more experienced, as well as pet industry personnel, a broad base of knowledge that will allow them to successfully keep a variety of insect-eating lizards." Colorfully illustrated, The Lizard Keeper's Manual provides chapter-length coverage on the following topics: selecting the right species of lizard, locating and purchasing a healthy lizard, quarantine and acclimation, types of vivaria, enclosures, vivarium design, heating, cooling/hibernation, lighting, humidity/ventilation, feeding/nutrition, handling, shipping/receiving, and diseases and disorders. The author recommends a number of excellent species for keepers, including geckos, chameleons, skinks, agamids, monitors, anoles, basilisks, as well as other large and miniature species. The chapter titled "Essential Concepts" is a crash course in herpetology, offering the reader an overview of the ontogeny (life stages), climatic and landscape factors, diet, water, and diseases of the lizard family. The chapter "General Guidelines for Popular Insect-Eating Lizards," which covers over thirty different lizards in terms of their requirements and descriptions, is an outstanding resource for lizard keepers looking to expand the population of their vivaria. Appendices and index included.
